CHAMBER OF COMMERCE
CONVENTION & VISITORS BUREAU

What's the result when an engineer and an artist collaborate? A sculpture titled **Tides created by Steve Kemp for the Hyannis HyArts Cultural District** which can withstand 120 mile per hour hurricane force winds! John Bologna, president of Coastal Engineering Company, gave us his time and expertise

to insure this piece meets the reality of being outside for years to come. This is one of two Creative Placemaking pieces you'll hear more about in the next few weeks-and which will be installed by summer. Funded by the MA Cultural Council with support from Coastal Community Capital, the Arts Foundation of Cape Cod, plus the Orleans and Mid-Cape Cultural Councils, the installations are poised to be a real part of people's experiences in both towns. Want to get involved in Creative Placemaking? Email Clare@capecodchamber.org

For those who don't know them, Coastal Engineering Company, Inc. (CEC) in Orleans provides professional civil, structural, and marine engineering and land surveying services to residential and commercial clients. CEC specializes in ecologically sensible and economically feasible solutions for clients projects. Their services include shorefront protection, stormwater management, historic preservation, sewage disposal system upgrades, and environmental permitting. Thanks, John!
