Best Engineering Project - Gold

Coastal Engineering Co., Inc.

The professionals at Coastal Engineering Company (CEC) take pride in the quality services they provide and are committed to achieving their clients' vision. The company's longstanding relationship with the Wequassett Resort and Golf Club in Harwich is a perfect example of CEC's ability to turn a client's vision into an experience that exceeds expectations. Working with Wequassett's team to enhance the resort's buildings and grounds, CEC recently provided engineering design and construction oversight of the new garden terrace project. With spectacular views of Pleasant Bay, the terrace now offers a variety of venues—complete with outdoor seating, fire pits, and stairways leading down to the water.

"It's a wonderful space for many people to enjoy—whether it's a bride coming down the grand staircase to have her wedding photos taken or vacationers creating memories,"

says CEC President John Bologna. "The new garden terrace allows the resort more space in which to host events such as the ever-popular jazz festival," Bologna says.

Coastal Engineering received a gold award at the 2014 BRICC Awards event for Best Engineering Project for its work on the project. "We are customer-service driven and we strive to understand our clients' expectations and to help them achieve their goals. Reputation is so important to this business and our reputation is evidenced by the repeat business of so many clients," Bologna says.

Founded in 1976, CEC has offices in Orleans, Sandwich, and Nantucket. The firm's projects have included engineering design for the restoration of the Pilgrim Monument, The Residences at Seashore Point in Provincetown and the redevelopment of the Cumberland Farms store in Dennis.
