

Shaw's/Star Market, Harwich Port, MA

About this project

The redevelopment of this 35-year-old retail facility into a new, state-of-the-art supermarket presented numerous challenges. As part of the revitalization of this 9.5-acre site in Harwich Port, improvements were made to the site's water and sewer infrastructure systems as well as to the traffic infrastructure around the site. Construction of the new-and-improved supermarket also involved extensive landscaping, new lighting, a redesigned parking lot, and a sophisticated wastewater treatment system.

Coastal Engineering's services included:

- Topographic and boundary surveys
- Civil engineering design and plan preparation
- Wastewater treatment plant design
- Environmental permitting
- Construction inspections and contract administration
- Wastewater treatment plant operation and maintenance.
