

Coastal Engineering Company is seeking an engineer to provide general engineering support, field work, inspections, shop drawing review, and CAD support for the Structural Division.

Job duties include:

- Engineering analysis and design of building structures based on Massachusetts State Building Code and other criteria per project requirements;
- Engineering analysis and design of coastal engineering structures, including docks, piers, wharfs, marinas, bulkheads, and revetments per Army Corps of Engineers Coastal Engineering Manual and other criteria per project requirements;
- Mark-up and review of engineering CADD drawings, including plans, elevations, sections, and details required for complete project description;
- Preparation of project specifications, bid documents and contract documents for competitive bid;
- Construction contract administration;
- Site inspections and reports;
- Preparation of structural evaluation reports and feasibility studies;
- Building code review and code compliance evaluation of existing structures and facilities;
- Meetings with contractors, clients, and other agents, as appropriate for project services;
- Engineering field work;
- Assisting Division Manager in preparation of project deliverables;
- Other duties, as appropriate.

Proficiency in AutoCAD and Microsoft Office applications is helpful. Experience with Architectural Desktop and structural engineering applications is required. Must have good verbal and written skills. EIT or PE preferred.

EOE. Please mail, fax, or email cover letter and resume to:

Coastal Engineering Company, Inc.
